

Packing & Loading Technical Reference

Export packing, container loading and document preparation reference for sandwich panel orders.

Product Overview

Export sandwich panel orders require practical packing and loading communication to reduce damage risk and help buyers plan unloading and installation. This reference is used for buyer review and order communication.

Typical Technical Parameters

Item	Reference Value / Range
Packing review	Panel stack protection, edge protection, waterproof wrapping and label confirmation
Loading review	Container type, stack height, forklift/unloading method and sequence
Document review	Commercial invoice, packing list, bill of lading and product technical documents by order
Accessory packing	Flashings, trims, fasteners and small parts packed separately and marked
Photo support	Factory, packing and loading photos can be prepared for buyer review when available

Selection Notes

Selection Item	Buyer Review Point
Order information	Provide product type, thickness, quantity, length, project country and destination port.
Container planning	Final loading plan depends on panel length, packing method, container type and shipping route.

Typical Applications

Application	Project Reference
Overseas contractors	Pre-shipment packing and unloading planning
Distributors	Container planning and warehouse receiving

Cold room projects	Panel stack protection and accessory identification
--------------------	---

Quotation Checklist

Item	Information to Provide
Panel type and core material	Confirm PU, PIR, rock wool, EPS or clean/cold room system.
Thickness and steel skin	Confirm core thickness, inner/outer steel sheet thickness, coating and color.
Quantity and dimensions	Provide panel length, effective width requirement, project quantity and drawings if available.
Application and country	Provide building use, project country, fire/insulation expectations and destination port.
Accessories and packing	Confirm flashings, fasteners, packing method and loading reference.

Reference Notes

Values are compiled from LIAOHE catalogue references and common product ranges. They are for preliminary buyer review, not a substitute for final order drawings or engineering confirmation.

Fire rating, thermal value, loading span and certification applicability must be confirmed according to product model, thickness, facing material and destination market requirement.
