

SANDWICH PANEL ACCESSORIES

Metal Flashings and Trims Guide

Roof edge, wall corner, ridge, eave, parapet, door, window and joint trims for insulated sandwich panel building envelope systems.

Material

Pre-painted or galvanized steel

Use

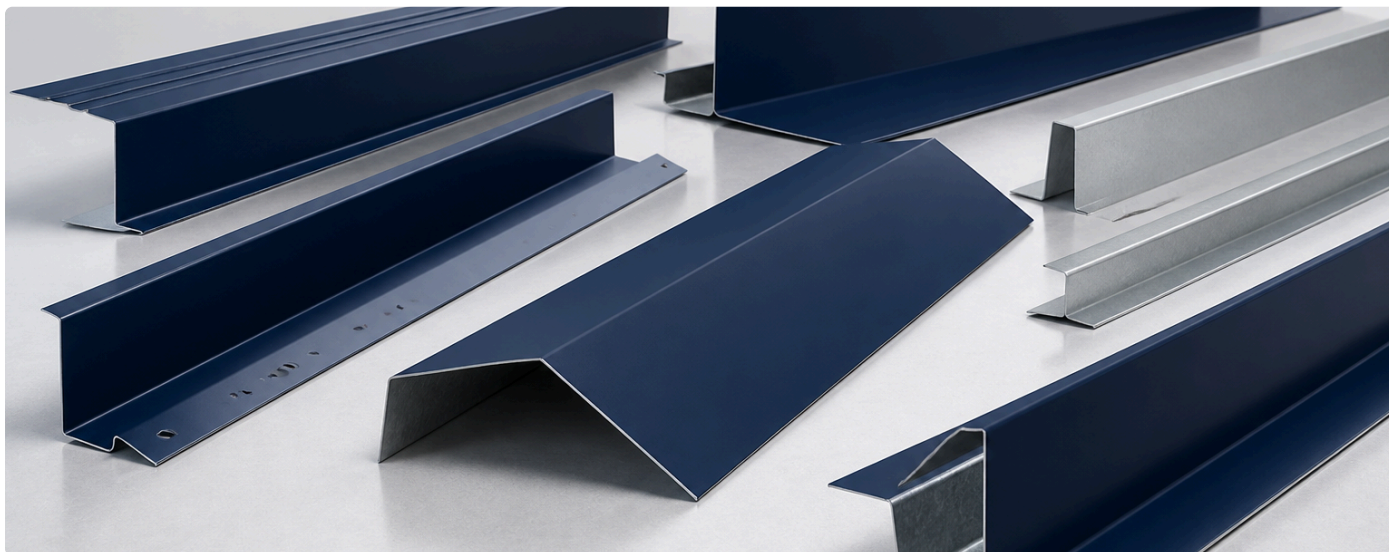

Roof, wall and opening details

Finish

Customized color and profile

Where Flashings Are Used

Flashings and trims complete the panel system. They protect edges, improve appearance and help coordinate roof, wall, corner and opening details.

Roof Ridge and Eave

Ridge caps, eave trims and gutter-side details for roof panel connections.

Wall Corners

External and internal corner trims for sandwich panel wall systems.

Door and Window Openings

Opening trims help finish panel cut edges and coordinate with frames.

Parapet and Edge Details

Custom folded profiles can be produced according to drawings and color requirements.

Ordering Information

Item	Information Needed
Profile drawing	Send section dimensions or project drawing for custom folded shapes.
Material	Confirm steel thickness, coating, galvanized or pre-painted finish.
Color	Provide RAL color or match the sandwich panel color.
Length and quantity	Confirm standard length, cutting plan and total pieces.
Application	Roof ridge, eave, wall corner, parapet, door/window trim or custom use.

Best Practice

Order flashings together with sandwich panels when possible. This helps keep color, coating, packing and shipment consistent for the whole building envelope package.
